DETAILED ACTION

Allowable Subject Matter

1. Claims 1, 8, 10, and 17-20 Allowed and renumbered 1-7 respectively.

The following is an examiner's statement of reasons for allowance: *

The prior art of record does not teach every limitation as a whole in claims 1 or 8. It would not have been obvious to combine prior arts of record to arrive at applicant's claimed invention. More specifically, they do not teach a wireless telephony apparatus that has a plurality of countries and their corresponding principal languages initially stored therein in a second memory area; a fourth memory area for storing country and language data used to initialize software; input means operable by a user to make selections from selections screens of a country in which the apparatus is being used, a principal language for that country, and an additional language different than the principal language; a fifth memory for storing a flag indicating user's selections; a sixth memory area for storing data identifying the country, the principal and different language the user selected; wherein if the flag is not set, the apparatus initializes the software in the first memory area by using the initial data specified by the index and stored in the second memory area; and wherein when the flag is set, the apparatus initializes the software in the first memory by using the user selections stored in the sixth memory which is checked so that if incorrect data is found therein, the data in the sixth memory is automatically deleted and the software is initialized by using the initial country and language data in the fourth memory.
